WEEKLY FOLIAR SCHEDULE	Vegetative to Week 2 – 3 of Bloom						
	Su	Mo	Tu	We	Th	Fr	Sa
<b>Solar Rain</b>		20mL				20mL	
<b>CalMag Fuel</b>				20mL			
<b>Silica Skin</b>		20mL					
<b>Lush Green</b>				5mL			
<b>Peak Bloom</b>						5mL	
<b>Resin Bloom</b>				20mL			

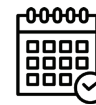

## FOLIAR INSTRUCTIONS

For one gallon of spray, measure amounts listed above. Adjust as needed to make more or less solution.

Mix & spray immediately, and do not adjust the pH! Saturate top and bottom of leaves well. Discard any remaining solution. Wash the spray tank and make sure the lines & nozzle are clean too!

Foliar sprays can safely be applied from the beginning of veg until approximately day 14 - 21 of flowering.

## FOLIAR TIPS & TRICKS

If you've never applied foliar nutrients before – start off with a small number of plants and work your way up to the full garden once you get a feel for how your plants react.

You can spray while lights are on; but test a small number of plants first and work your way up from there. Dimming the lights is always a safe bet.

Spray at any time of day – try applying before sunrise, during the middle of the day, or at night, and see what your plants respond to best.

If you want suggestions for other combinations, email us and we'll help you build the right foliar program!

Use instruction: Add the products in the order they appear.

### USE RATES ARE IN MILLILITERS PER GALLON

1/2 tsp = 2.5 mL • 1 tsp = 5mL • 1 Tbs = 15mL • 1 oz = 30 mL • 1 Gal = 3.8 L
